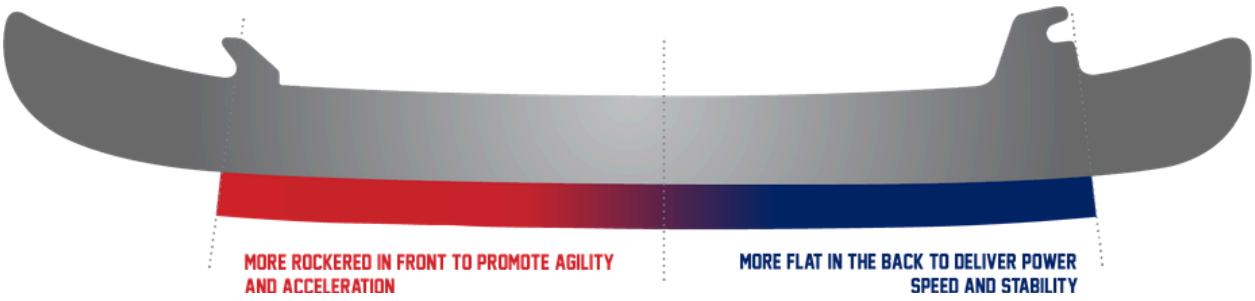
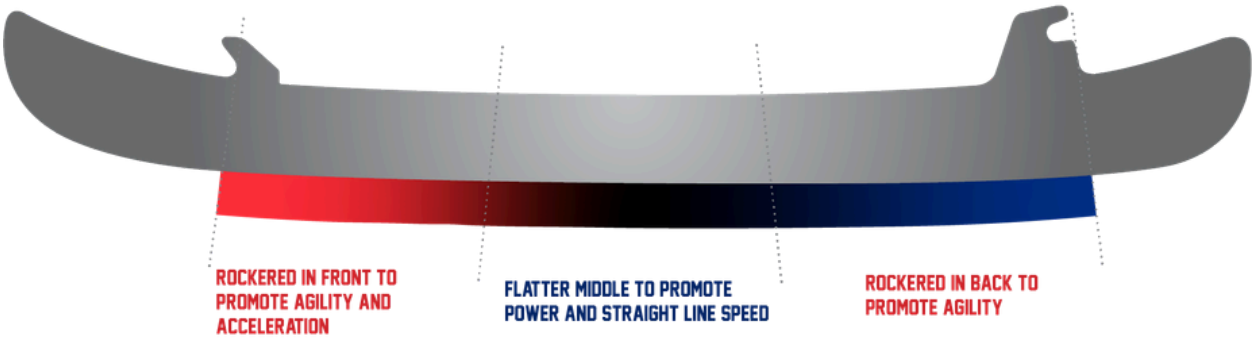
ELITE
BLADE PERFORMANCE

## HEEL GLIDES



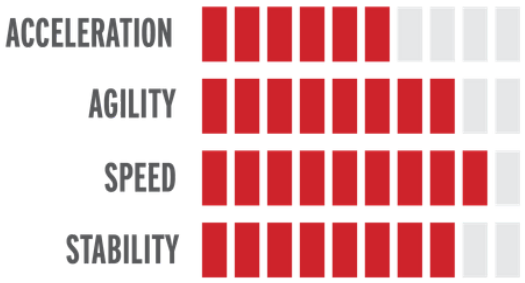
## CENTER GLIDES



# HEEL GLIDES

Heel glides are flatter toward the heel (to enhance glide, stability, and speed) and more curved toward the toe (for agility and acceleration). The balance point is a bit front of center. Most performance profiles (i.e. multiple radius profiles) on the market today are Heel Glides.

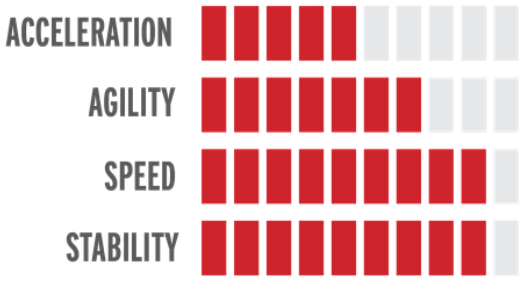
## POLARIS 1



The Polaris 1 is an offspring of the original Polaris. It has the same playing attributes, but a lighter feel. Trades off a tiny bit of stability for a little more agility.

LARGE, STANDARD

## POLARIS 2



The Original Polaris, the Polaris 2 offers agility with exceptional power and stability, smooth transitions and a slight forward pitch feeling. It feels lighter in the heel than traditional Quads, which provides extra agility. **A pro favourite.**

LARGE, STANDARD, JUNIOR

## POLARIS 3

Another offspring of the original Polaris, but a little more solid feeling. Trades off a little agility for maximum power and stability. Well suited to larger ice surfaces and players who favour wide arcs and powerful strides.

LARGE, STANDARD

## EL 4.1 QUAD

Fast, powerful, solid. Smooth transitions. Slight forward pitch feel. The lightest feel of the quads. (Similar to the Prosharp Quad Zero)

LARGE, STANDARD (6'-9'-11'-13')

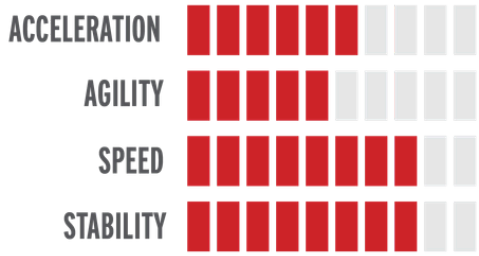
JUNIOR (5'-8'-10'-12')

# HEEL GLIDES (CONT.)

## EL4.2 QUAD

A little less agile feeling than the 4.1, with good balance. A good mix of power and agility. Extremely solid, stable feeling profile. (Similar to the Prosharp Quad 2)

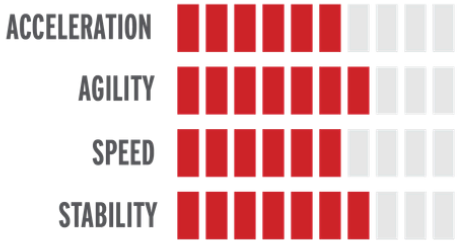
LARGE, STANDARD (7'-10'-13'-16')



## EL3.1 TRIPLE

Light, agile toe, with a very slight forward pitch feel. Flatter heel provides good stability. Good mix of agility, power, and stability. (Similar to the Prosharp Zuperior.)

LARGE, STANDARD (6'-12'-16')
LARGE, STANDARD (6'-12'-16')



## 7′-13′ DUO

Great all-around profile, strong glide, some forward pitch feel. Some find the transition from toe to heel to be a bit abrupt.

## 8′-12′ DUO

Similar to 7-13, with slightly less forward pitch feel.

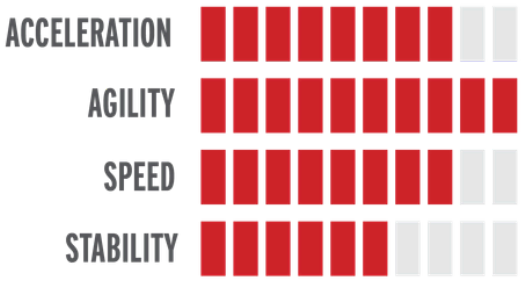
## 9.5′-10.5′ DUO

This is close to a stock blade. Decent balance of agility and stability with a light feel.

# CENTER GLIDES

Center Glide profiles flatten an area under the middle of the blade to provide more contact with the ice surface, while the toe and heel sections are comparatively more curved. The balance point is in the middle of the blade. Traditional CAG-ONE profiles fit into this category. Elite's SCS series is our most popular and high performing profile in the Center Glide family.

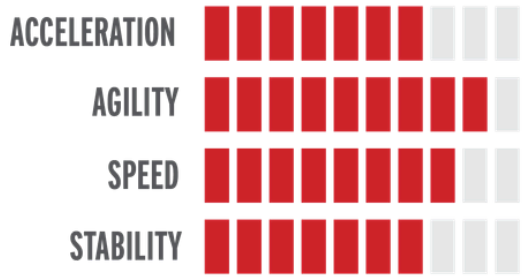
## SCS1



Four radius curves, flattest in the center of the blade. Very powerful and smooth-skating profile, with high top-end speed and powerful turns while preserving agility and explosiveness. This is the most agile of the SCS profiles, with the most rockered heel and toe sections. **A pro favourite.**

LARGE, STANDARD, JUNIOR

## SCS HYBRID



The Original Polaris, the Polaris 2 offers agility with exceptional power and stability, smooth transitions and a slight forward pitch feeling. It feels lighter in the heel than traditional Quads, which provides extra agility. **A pro favourite.**

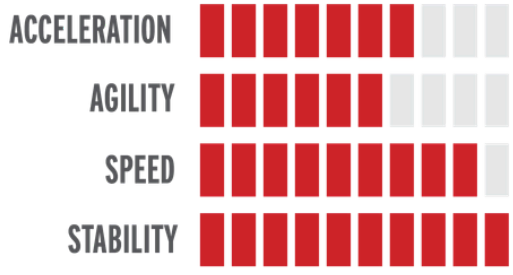
LARGE, STANDARD, JUNIOR

## SCS 2

Similar to the SCS-1 but subtly more stable. It has the same mid-foot flatter-radius curves as the SCS-1(for same speed and glide), but with slightly less rockered toe (for fuller stride extension) and heel (for greater power and stability). **A pro favourite.**

LARGE, STANDARD

## SCS 3



Slightly flatter mid-foot radius curves than the SCS1 and 2, and even less rockered heel and toe making for an extremely stable and powerful profile with somewhat less agility. Particularly well suited to large ice surfaces and players who appreciate a very solid feel.

LARGE, STANDARD

# MONOS

## 10′ MONO

Stock, out of the box blade. Decent basic blade with some agility/stability, but no performance gains in agility, power, speed, or stability.

# GOALIE PROFILES

## 26'-30' DUO

Great all-around profile, strong glide, some forward pitch feel. Some find the transition from toe to heel to be a bit abrupt.

## 30' MONO

Standard stock goalie blade. Short release zone at each end.

## 28′ MONO

Slightly more rockered feel than the 30.

### BLADE SIZES:

**LARGE**: Blades sizes 272 and above.
**STANDARD**: Blade sizes 254 to 272.
**JUNIOR**: Blade sizes 246 and below.
Mono and Duo templates are universal and work for all blade sizes.

### PITCH OPTIONS:

All templates come with neutral and three forward pitched orientations (integrated in the E-P3): 1/64”, 1/32” and 3/64”.
